Introduction

Index Objective and Highlights

The S&P Global Bond Futures Index Series **measures the performance of the nearest maturing bond futures contract.** The indices are denominated in the currency of the underlying futures contract.

Supporting Documents

This methodology is meant to be read in conjunction with supporting documents providing greater detail with respect to the policies, procedures and calculations described herein. References throughout the methodology direct the reader to the relevant supporting document for further information on a specific topic. The list of the main supplemental documents for this methodology and the hyperlinks to those documents is as follows:

Supporting Document	URL
S&P Dow Jones Indices' Commodities Indices Policies & Practices Methodology	Commodities Indices Policies & Practices
S&P Dow Jones Indices' Index Mathematics Methodology	Index Mathematics Methodology

This methodology was created by S&P Dow Jones Indices to achieve the aforementioned objective of measuring the underlying interest of each index governed by this methodology document. Any changes to or deviations from this methodology are made in the sole judgment and discretion of S&P Dow Jones Indices so that the index continues to achieve its objective.

Index Construction

S&P Global Bond Futures Index Series

The S&P Global Bond Futures Indices are constructed from the front month futures contract traded on **global futures exchanges**. The table below lists the contracts, corresponding exchanges, index base dates and index first value dates.

Index	Underlying Futures Contract	Symbol	Exchange	Base Date	First Value Date
S&P U.S. Treasury Bond Futures	U.S. Treasury Bond Futures	US	CME	09/09/1997	01/07/1980
S&P 2-Year U.S. Treasury Note Futures	2-Year U.S. Treasury Note Futures	TU	CME	12/01/1999	12/01/1999
S&P 5-Year U.S. Treasury Note Futures	5-Year U.S. Treasury Note Futures	FV	CME	06/30/1988	06/30/1988
S&P 10-Year U.S. Treasury Note Futures	10-Year U.S. Treasury Note Futures	TY	CME	12/01/1999	06/02/1982
S&P Ultra 10-Year U.S. Treasury Note Futures	Ultra 10-Year U.S. Treasury Note Futures	TN	CME	01/08/2016	01/08/2016
S&P Ultra T-Bond Futures	Ultra T-Bond Futures	UL	CME	02/26/2010	02/26/2010
S&P Euro-Schatz Futures	Euro-Schatz Futures	FGBS	EUREX	12/01/1999	12/01/1999
S&P Euro-Bobl Futures	Euro-Bobl Futures	FGBM	EUREX	12/01/1999	12/01/1999
S&P Euro-Bund Futures	Euro-Bund Futures	FGBL	EUREX	12/01/1999	12/01/1999
S&P Euro-Buxl Futures	Euro-Buxl Futures	FGBX	EUREX	12/01/1999	12/01/1999
S&P Euro-OAT Futures	Euro-OAT Futures	FOAT	EUREX	04/30/2012	04/30/2012
S&P Euro-BTP Futures	Euro-BTP Futures	FBTP	EUREX	09/30/2009	09/30/2009
S&P Swiss-CONF Futures	Swiss-CONF Futures	CONF	EUREX	12/01/1999	12/01/1999
S&P Long Gilt Futures Index	Long Gilt Futures	FLG	ICE	12/01/1999	12/01/1999
S&P 10-Year Canada Government Bond Futures Index	10-Year CGB Futures	CGB	MX	12/01/1999	12/01/1999
S&P 10-Year JGB Futures	10-Year JGB Futures	JGB	JPX	12/30/1998	12/30/1998
S&P/ASX Australian 3-Year Treasury Bond Futures	3-Year Australian Treasury Bond Futures	YT	ASX	12/01/1999	12/01/1999
S&P/ASX Australian 10-Year Treasury Bond Futures	10-Year Australian Treasury Bond Futures	XT	ASX	12/01/1999	12/01/1999
S&P/ASX Australian 20-Year Treasury Bond Futures	20-Year Australian Treasury Bond Futures	XX	ASX	10/15/2015	10/15/2015
S&P/ASX Australian 3-Year Treasury Bond (Dollar Value) Futures	3-Year Australian Treasury Bond Futures	YT	ASX	12/01/1999	12/01/1999
S&P/ASX Australian 10-Year Treasury Bond (Dollar Value) Futures	10-Year Australian Treasury Bond Futures	XT	ASX	12/01/1999	12/01/1999
S&P/ASX Australian 20-Year Treasury Bond (Dollar Value) Futures	20-Year Australian Treasury Bond Futures	XX	ASX	10/15/2015	10/15/2015

Futures Roll

Constructed from futures contracts, each index includes provisions for the replacement of the Index Futures Contracts as it approaches maturity (also referred to as “rolling”).

- (1) For all the U.S. Treasury Futures and Ultra T-Bond contracts, this replacement occurs over a one-day rolling period every quarter, starting one day prior to the First Position Date as published by the CME Group. For more information pertaining to the product calendar, please refer to the CME Group web site at http://www.cmegroup.com/trading/interest-rates/us-treasury/30-year-us-treasury-bond_product_calendar_futures.html.
- (2) For the Euro and Swiss Futures, the contract switch will occur over a one-day roll occurring three business days prior to the contract expiration. For more information pertaining to the product

calendar, please refer to the EUREX Web site at <http://www.eurexchange.com/exchange-en/trading/trading-calendar>.

- (3) For the Long Gilt Futures, the contract switch will occur over a one-day roll occurring three business days prior to the First Notice Day. For more information pertaining to the product calendar, please refer to the ICE web site at <https://www.theice.com/holiday-hours>.
- (4) For the 10-Year Canada Government Bond Futures, the contract switch will occur over a one-day roll occurring three business days prior to the First Notice Day. For more information pertaining to the product calendar, please refer to the Montreal Exchange web site at https://www.m-x.ca/qui_jours_en.php.
- (5) For the JGB Futures, the roll date is two business days prior to the last trading day of the futures contract. The last trading day for JGB futures is seven business days prior to the contract settlement day. Please refer to the JPX web site for their product calendar. <http://www.jpj.co.jp/english/derivatives/products/jgb/jgb-futures/index.html>.
- (6) For the Australian Bond Futures, the roll date is two business days prior to the last trading day of the futures contract. Please refer to the ASX web site for product and holiday calendar, <http://www.asx.com.au/products/asx-interest-rate-futures-and-options-trading-information.htm>.

For more information on the S&P Global Bond Futures Indices, please refer to our Web site at www.spdji.com.

Market Disruptions during the Roll Period

Market disruptions are situations where an exchange has failed to open so that no trading is possible due to unforeseen events, such as computer or electric power failures, weather conditions or other events. If any such event happens on the roll date, the roll will take place on the next Business Day on which no market disruptions exist.

Excess Return Index Calculation

The excess return of each of the indices is calculated from the price change of the underlying future's contract. On any trading date, t , the level of each of the indices is calculated as follows:

$$\text{ExcessReturnIndex}_t = \text{ExcessReturnIndex}_{t-1} * (1 + \text{CDR}_t) \quad (1)$$

where:

$\text{ExcessReturnIndex}_{t-1}$ = The Excess Return Index level on the preceding business day.

Calculation of the Contract Daily Return

On any business day, the Contract Daily Return is equal to the ratio of the Total Dollar Weight Obtained (TDWO) on such Day and the Total Dollar Weight Invested (TDWI) on the preceding S&P GSCI Business Day, minus one.

In formulaic terms, the Contract Daily Return is calculated as follows:

$$\text{CDR}_t = \frac{\text{TDWO}_t}{\text{TDWI}_{t-1}} - 1$$

where:

$$\text{TDWO}_t = \text{CRW}_{1,t-1} * \text{DCRP}_{1,t} + \text{CRW}_{2,t-1} * \text{DCRP}_{2,t}$$

$$\text{TDWI}_{t-1} = \text{CRW}_{1,t-1} * \text{DCRP}_{1,t-1} + \text{CRW}_{2,t-1} * \text{DCRP}_{2,t-1}$$

t = the business day on which the calculation is made.

$CRW1$ = the Contract Roll Weight of the First Nearby Contract Expiration.

$CRW2$ = the Contract Roll Weight of the Roll Contract Expiration.

$DCRP$ = the Daily Contract Reference Price of each respective Contract Expiration.

For S&P/ASX Australian 3-Year, 10-Year and 20-Year Treasury Bond (Dollar Value) Futures Indices, the excess return is calculated using the dollar value change rather than the price change. The dollar value is calculated using the price of the underlying future's contract, following the local Australian market convention in which performance is measured using the dollar value including interest.

Dollar Value Calculation

$$DV = FV \times \left[\frac{c(1-v^n)}{i} + 100v^n \right] \quad (2)$$

where:

DV = Dollar Value

FV = Face Value = 1000 for both 3-Year and 10-Year Treasury bond futures, and 500 for 20-Year Treasury bond futures

$$i = \frac{100 - price}{200}$$

$Price$ = Price of the underlying future's contract

$$v = \frac{1}{1+i}$$

$$c = \frac{coupon\ rate}{2}$$

$Coupon\ Rate$ = 6% for both 3-Year and 10-Year Treasury bond futures, and 4% for 20-Year Treasury bond futures

n = Coupon frequency, or years \times 2 for payments on a semi-annual basis. For example, for 3-Year bond futures, $n = 3 \times 2 = 6$.

v , v^n and $\frac{c(1-v^n)}{i}$ are rounded to eight decimal places and the dollar value is rounded to two decimal places.

Calculation of Index Total Return

For a funded investment, the total return between dates $t-1$ and t includes risk free return for the initial cash outlay:

$$IndexTotalReturn_t = (CDR_t + RiskFreeRate_t) * (1 + RiskFreeRate_t)^{Delta_t} \quad (3)$$

where:

$Delta_t$ = number of non-business days since the preceding business day

For the indices denominated in different currencies, a different risk-free rate is used for the total return calculation above.

- (i) If the index is denominated in US Dollars (US\$) the risk free rate in equation (3) above is the Treasury Bill Rate,

$$\text{Risk Free Rate}_t = TBR_t,$$

where TBR is the daily-compounding Treasury Bill rate, as determined by the following formula:

$$TBR_t = \left[\frac{1}{1 - \frac{91}{360} * TBAR_{t-1}} \right]^{\frac{1}{91}} - 1 \quad (4)$$

where:

$TBAR_{t-1}$ = the most recent weekly high discount rate for 91-day US Treasury bills effective on the preceding business day. Generally the rates are announced by the US Treasury on each Monday. On Mondays that are bank holidays, Friday's rates will apply.

- (ii) If the index is denominated in Euros (€) the risk free rate in equation (3) above is the German Bubill rate.

$$\text{Risk Free Rate}_t = GBR_t,$$

where GBR is the daily-compounding German Bubill rate, as determined by the following formula:

$$GBR_t = \left[\frac{1}{1 - \frac{91}{360} * SGBR_{t-1}} \right]^{\frac{1}{91}} - 1 \quad (5)$$

where:

$SGBR_{t-1}$ = the simple discount rate for the generic 3-month German Bubill rate effective on the preceding business day, with the day-count convention ACT/360.

- (iii) If the index is denominated in Swiss Franc (CHF) the risk free rate in equation (3) above is the Swiss 3 Month Benchmark rate.

$$\text{Risk Free Rate}_t = SBR_t,$$

where SBR is the daily-compounding Swiss 3 Month Benchmark rate, as determined by the following formula:

$$SBR_t = \left[\frac{1}{1 - \frac{91}{360} * SSBR_{t-1}} \right]^{\frac{1}{91}} - 1 \quad (5)$$

where:

$SSBR_{t-1}$ = the simple discount rate for the generic Swiss 3 Month Benchmark rate effective on the preceding business day, with the day-count convention ACT/360.

- (iv) If the index is denominated in British Pound (GBP) the risk free rate in equation (3) above is the United Kingdom 3 Month Benchmark rate.

$$\text{Risk Free Rate}_t = PBR_t,$$

where PBR is the daily-compounding United Kingdom 3 Month Benchmark rate, as determined by the following formula:

$$PBR_t = \left[\frac{1}{1 - \frac{91}{365} * SPBR_{t-1}} \right]^{\frac{1}{91}} - 1 \quad (5)$$

where:

$SPBR_{t-1}$ = the simple discount rate for the generic United Kingdom 3 Month Benchmark rate effective on the preceding business day, with the day-count convention ACT/360.

- (v) If the index is denominated in Canadian Dollar (CAD) the risk free rate in equation (3) above is the Canadian Dollar 3 Month Interest Rate Fixing.

$$\text{Risk Free Rate}_t = CBR_t,$$

where CBR is the daily-compounding Canadian Dollar 3 Month Interest Rate Fixing, as determined by the following formula:

$$CBR_t = \left[\frac{1}{1 - \frac{91}{365} * SCBR_{t-1}} \right]^{\frac{1}{91}} - 1 \quad (5)$$

where:

$SCBR_{t-1}$ = the simple discount rate for the generic Canadian Dollar 3 Month Interest Rate Fixing effective on the preceding business day, with the day-count convention ACT/360.

- (vi) If the index is denominated in Japanese Yen (¥) the risk free rate in equation (3) above is the Japanese Government Discount Bill rate.

$$\text{Risk Free Rate}_t = JBR_t,$$

where JBR is the daily-compounding Japanese Government Bill rate, as determined by the following formula:

$$JBR_t = \left[\frac{1}{1 - \frac{91}{365} * SJBR_{t-1}} \right]^{\frac{1}{91}} - 1 \quad (6)$$

where:

$SJBR_{t-1}$ = the simple discount rate for the generic 3-month Japanese Government Bill rate, effective on the preceding business day, with the day-count convention ACT/365.

- (vii) If the index is denominated in Australian Dollars, the risk free rate in equation (3) above is the Australian 3-month Bank Bill rate.

$$\text{Risk Free Rate}_t = ABBR_t,$$

where $ABBR$ is the daily-compounding Australian Bank Bill rate, as determined by the following formula:

$$ABBR_t = \left[\frac{1}{1 - \frac{91}{365} * SABBR_{t-1}} \right]^{\frac{1}{91}} - 1 \quad (7)$$

where:

$SABBR_{t-1}$ = the simple discount rate for the generic 3-month Australian Bank Bill rate, effective on the preceding business day, with the day-count convention ACT/365.

Total Return Index Calculations

$$TotalReturnIndex_t = TotalReturnIndex_{t-1} * (1 + IndexTotalReturn_t) \quad (8)$$

where:

$TotalReturnIndex_{t-1}$ = The Total Return Index level on the preceding business day.

$IndexTotalReturn_t$ = The excess return from holding the underlying futures contract.

Index Maintenance

Rebalancing

Explicit in the calculation of futures based indices is the rolling of futures contract. Therefore, no separate announcements are made.

Currency of Calculation and Additional Index Return Series

Additional currency and currency hedged versions of the indices, as well as maturity, sector, and rating-based sub-indices, may be available. For a list of available sub-indices and tickers, please refer to S&P Dow Jones Indices' Fixed Income Index Directory available at www.spdji.com.

For more information on currency and currency hedged indices, please refer to S&P Dow Jones Indices' Fixed Income Index Mathematics Methodology.

Index Governance

Index Committee

The Commodities Index Committee maintains the S&P Global Bond Futures Index Series. All members of the Committee are full-time professionals at S&P Dow Jones Indices. The Committee meets regularly. The Committee may revise index policy covering rules for including currencies, the timing of rebalancing or other matters.

S&P Dow Jones Indices considers information about changes to its indices and related matters to be potentially market moving and material. Therefore, all Index Committee discussions are confidential. The Index Committee is separate from and independent of other analytical groups at S&P Global. In particular, the Index Committee has no access to or influence on decisions by S&P Global Ratings analysts.

S&P Dow Jones Indices' Index Committees reserve the right to make exceptions when applying the methodology if the need arises. In any scenario where the treatment differs from the general rules stated in this document or supplemental documents, clients will receive sufficient notice, whenever possible.

In addition to the daily governance of indices and maintenance of index methodologies, at least once within any 12-month period, the Index Committee reviews the methodology to ensure the indices continue to achieve the stated objectives, and that the data and methodology remain effective. In certain instances, S&P Dow Jones Indices may publish a consultation inviting comments from external parties.

For information on Quality Assurance and Internal Reviews of Methodology, please refer to S&P Dow Jones Indices' Commodities Indices Policies & Practices Methodology.

Index Policy

Announcements

The indices are calculated daily when the relevant futures markets are open for official trading, excluding holidays and weekends.

Holiday Schedule

The indices are calculated daily, throughout the calendar year. For indices based on futures contracts traded on the CME, they follow the CME holiday schedule. The S&P Euro & Swiss-denominated Futures Indices follow the EUREX Exchange holiday schedule and the S&P 10-year JGB Futures index follows the JPX holiday schedule. The S&P/ASX Australian Bond Futures follow the SFE (Sydney Futures Exchange) holiday schedule.

Rebalancing

The Index Committee may change the date of a given rebalancing for reasons including market holidays occurring on or around the scheduled rebalancing date. Any such change will be announced with proper advance notice where possible.

Unexpected Exchange Closures

For information on Unexpected Exchange Closures, please refer to S&P Dow Jones Indices' Commodities Indices Policies & Practices Methodology.

For information on Calculations and Pricing Disruptions, Expert Judgment, Data Hierarchy and Error Corrections, please refer to S&P Dow Jones Indices' Commodities Indices Policies & Practices Methodology.

Contact Information

For questions regarding an index, please contact: index_services@spglobal.com.

Index Dissemination

Index levels are available through S&P Dow Jones Indices' Web site at www.spdji.com, major quote vendors (see codes below), numerous investment-oriented Web sites, and various print and electronic media.

Tickers

The table below lists headline indices covered by this document. All versions of the below indices that may exist are also covered by this document. Please refer to [S&P DJI's All Indices by Methodology Report](#) for a complete list of indices covered by this document.
